

LOCATION: PL-1-486

HYDRAULIC CONDITIONS: Apparant Artesian

PERTINENT OBSERVATIONS:

Borehole was drilled to 472', blown clean, and allowed to recover overnight. No water accumulated in the borehole. Signs of water occurred at approximately 482' (drilling fluid thinned and pressure increased within the borehole according to the rig's pressure gauges). Borehole was drilled to total depth (537') and allowed to recover overnight. Static measured at 446.3' below grade the next day.
